# Videoconferencing — Virtual Presence Communications for Telejustice Applications

Picture courtesy of Marconi ViPr

ExhibitOne partners with videoconferencing manufacturers to deliver broadcast-quality video and high-fidelity audio, enabling interactive communications of unprecedented quality, which is an ideal platform for telejustice applications. Critical levels of clarity and synchronized sound are necessary in areas like courtrooms and judges' chambers, where life-altering decisions are commonplace. ExhibitOne integrates systems that have the unique ability to support live or prerecorded video simultaneously with an active conference. Uniting cost savings from transportation with quality communications:

- Integrated surveillance camera for viewing alternate room angles

- Integration of various document-sharing cameras and systems, including witnessing of signatures
- Simplified presentation of evidence during proceedings (e.g., video used in a protection-from-abuse application)
- Unlimited video channels for broadcast to all local and remote conference participants

Desktop and conference/courtroom configurations are available. Sessions can be displayed on large-screen monitors or projectors for audience viewing or for larger-scale meetings. And there's no need to worry about equipment sitting stagnant.

Studies have proven that videoconferencing is a sound investment because it's an intuitive, easy-to-learn tool that people actively use. ExhibitOne's solutions offer unparalleled video and audio quality and ease of use. A rich suite of tools makes teleconferencing an ideal solution for a wide range of applications, including the following:

- Remote arraignment
- Video parole hearings
- Sensitive and remote witness testimony
- Remote interrogation and lineups
- Remote participation for high-risk defendants
- Private attorney consultation
- Inmate visitation
- Medical and psychological evaluations
- Staff training and distance learning
- Remote language translation, including sign language
- Video recording of proceedings
- Services for rural and underserved areas

## ExhibitOne Overview

- National Leader in Audio Visual Design & Integration
- Founded 1994
- 600+ Installations
- Leading A/V Provider in Federal, State & Enterprise Markets

ExhibitOne's audio visual solutions are specifically designed based upon your needs. ExhibitOne is authorized to represent the world's top manufacturers of A/V equipment. Our engineering staff is trained and certified to ensure system functionality with design, programming, integration, training and on-going support. ExhibitOne holds itself to the highest standards by meeting scheduling deadlines and providing the best customer service.
