ExhibitOne Industry News

Dear Michele,

ExhibitOne publishes the Inside E1 NewsBrief on a regular basis for our clients, market partners, and those who have an interest in audio/visual technology. We hope that you find this edition to be informative. Please forward this to others who may also benefit.

The Problem of Language in the Courtroom

U.S. hospitals are required to supply language services to allow non-English patients to fully participate in the healing process. However, language requirements for courts, where consequences can be just as significant, don't quite match up. Language support is required in federal courts. But after that it varies greatly by state.

To put the challenge in perspective, a 2007 report by the Administrative Office of the U.S. Courts says that between October 2006 and September 2007 there was a 17 percent increase in the number of events in federal courts requiring interpreters for a total of 115 languages. According to the National Association of Judiciary Interpreters and Translators, there are approximately 3,000 certified interpreters in the U.S.; only 500 of which are able to translate a language other than Spanish.

A solution to this dilemma is the use of video - and teleconferencing technologies that enable centrally located translators to electronically enter courtrooms and provide translation services at the push of a button.

ExhibitOne's Virtual Court-Interpreter System™ provides courts with the technology needed to ensure courts are able to successfully utilize interpretive services on a remote basis.

So Many Formats. What's a Projector to Do?

The new wide-screen 1080p formats are great! So much so, that when it comes to projectors, it would only make sense to head down that road. Uh, well...not so fast. There are still a lot of computers and other video sources using the 1024x768 XGA format, analog composite, S-video (720x480) and even the occasional SVGA (800x600). Gasp! You mean the 4:3 world isn't dead yet??

To make a long story short...no.

If you are thinking about a projector during this time of format transition, the safest choice may not necessarily be the most aesthetically pleasing choice. That means installing a 16:10 screen and opting for a 1280x800

projector. With a 1280x800 projection system you will be right in the middle of the "resolution road" for just about any video signal source.

CSI's Impact on Juries

Over the years there has been concern that people watching TV shows such as CSI, Law & Order, American Justice etc., would have higher than normal expectations as to the level and types of evidence that should be presented in a case when it became their turn to be a juror.

A study was done of more than 1,000 prospective jurors to see if that was in fact the case.

The results? Forty-five and 42 percent of the jurors surveyed watched Law & Order and CSI respectively. As it turned out, they did have higher expectations for scientific evidence being presented than non-CSI/Law & Order viewers. But, further analysis showed those expectations had little, if any, bearing on their propensity to convict.

Case closed. (Phew!)
